

WHAT'S LURKING IN YOUR CLOSET?

TO YOU

IT'S JUST OLD HARDWARE
TO DATA THIEVES
IT'S A GOLD MINE

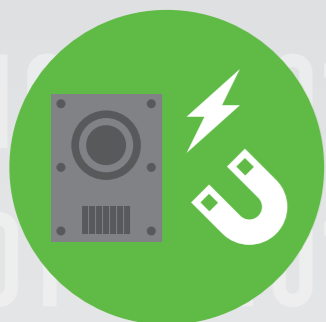

YOU'VE BEEN KEEPING HARD DRIVES UNDER LOCK AND KEY IN A CLOSET OR STORAGE FACILITY. IT'S UNDER LOCK AND KEY, SO IT'S SECURE, RIGHT? WRONG!

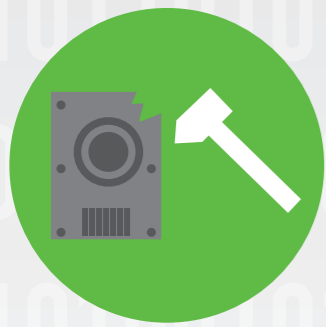

STOCKPILING OLD HARD DRIVES LEAVES YOU VULNERABLE.

Whether it's your IT closet, or an offsite storage facility, confidential information stored on hard drives, back-up storage and other eMedia is the target of data thieves.

DATA THAT YOU ERASE, REFORMAT, WIPE OR DEGAUSS CAN BE RESTORED.

You already know that erasing is not 100% safe, no matter what the software promises. The actual data remains. Information thieves can restore the data you thought was destroyed.

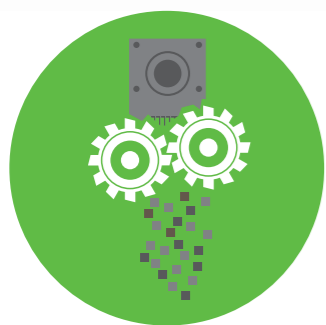

IMPROPER DESTRUCTION COULD LEAD TO A COSTLY BREACH.

Storing confidential information, in any form, is putting your organization at risk of a security breach and liability. On average, a security breach will cost a business CHF. 6 million*, not to mention reputation damage and loss of business.

WHY PUT YOUR COMPANY AT RISK?

The cost to destroy your hard drives is minimal compared to the potential risks you face when you don't. Katana and its unique solution will shred your hard drives on-site at minimal cost and recycle the shredded particles.

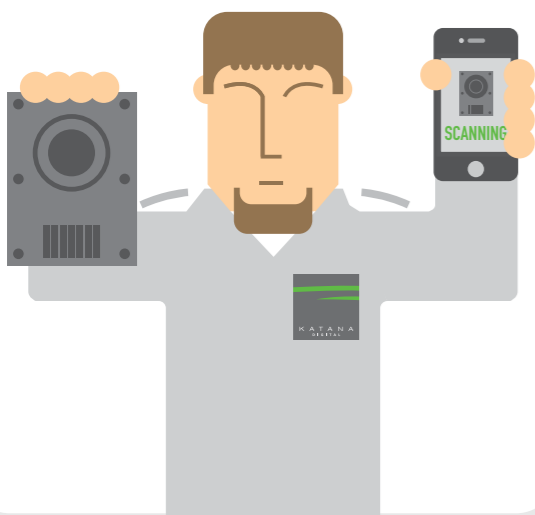

DESTROYING A HARD DRIVE 100% IS THE EFFECTIVE WAY TO PERMANENTLY RENDER ITS INFORMATION INACCESSIBLE.

Katana is the only solution in Switzerland to shred your hard drives on site. The chain of custody is complete from the scanning of your HD to your certificate of destruction.
